Executive Summary

NRSP received funding from WaterAid to implement “Developing Coastal Communities through Integrated WASH Interventions” (DCCIWI) project in Coastal areas of Thatta and Badin districts of Sindh. DCCIWI project is targeting 14,000 households of 8 Union Councils of district Badin and Thatta respectively. Areas selected for project interventions are disaster prone and people of these areas are the consistent affectees of natural calamities. Non-availability of the safe drinking water coupled with bad sanitation and poor hygiene posed a high risk of water borne diseases like diarrhea, cholera and malaria, aggravating the already compromised status of families and potentially resulting to increased morbidity and mortality.

NRSP conducted the baseline survey to ascertain the knowledge, attitude and practices of the target population on water supply, sanitation and hygiene before takeoff stage of project interventions. The KAP survey will be used to highlight the root causes of poor adoption of hygiene practices, Water quality at households and socio-cultural practices in the selected villages and will provide a baseline for evaluation of program effectiveness.

The survey was conducted in September 2013. Total 1,400 households comprising 57 percent men and 43 percent women were interviewed through structured questions whereas FGDs on the subject of WASH were organized with representatives of networks of community organizations (LSOs and VOs). In order to gather comprehensive information of KAP in project areas, respondents having multidimensional demographic characteristics were interviewed. Key results of KAP survey show that;

92 percent households were practicing open defecation and only 3 percent households had an

access to improved sanitation facilities, remaining households were using unimproved sanitation facilities.

Proper hand washing at the most critical times was very poor. About 84 percent of the households were washing hands during the key times only with water and 15 percent of the respondents were washing hands with soap and water.

Up to 83 percent households interviewed had an access to safe drinking water from safe water sources i.e. from hand pumps and filtration plants, while, 17 percent of the target population was using drinking water from unsafe water sources.

95 percent of the total household interviewed said that they throw the household wastes to the bush/ garden or leave them in the compound; No proper solid waste management system found in surveyed areas.

Background

Diarrhea is the main disease associated with unsafe water and poor sanitation and is responsible for the deaths of 1.8 million people every year, 90% of which are children under five years age¹. It is estimated that 1.6 million deaths per year are attributed to unsafe water supply and poor sanitation. This figure includes 88% of the deaths due to diarrheal diseases world-wide which is considered to be the attributable fraction of diarrhea due to unsafe water supply and poor sanitation².

Pakistan is one of those countries cursed with this deadliest problem. Being a resource scarce country greater proportion of Pakistan's health budget is spent on cure of such diseases that can be circumvented easily by taking preventive measures by programming and prioritizing areas. It is evident from research studies across the globe that the major contributing and complementing factor in meager health of people is poor sanitation and hygiene conditions. This is the area that is least emphasized in many economies, particularly in least developed or developing countries. According WHO survey, in 2010 around 884 million people around the world still lack access to improved water supply and around 2.6 billion people have lack of access to improved sanitation.

In Pakistan, diarrhea is the leading cause of death for children under five years of age. Approximately 16,103 children under the age of five in Pakistan died each year due to diarrhea³. In coastal zone of Sindh province, inclusive of Indus delta is 348 km long and spread over a geographical area of 9,930 sq. km. It has diverse & productive habitats, natural resources and ecosystems. Due to upstream irrigation works and gradual reduction in freshwater flows since 1977, the Indus delta is facing acute stress from seawater

intrusion and an increase in salinity and water-logging.

Project Introduction

The coastal districts of Thatta and Badin have experienced six major natural disasters including cyclones, droughts, floods and flash floods during the last decade. According to the baseline survey of Sindh Coastal Community Development Project (SCCDP) conducted in March, 2012, the worst affected areas in terms of degraded natural resources and rampant poverty are the 8 coastal sub-districts/talukas including Badin and Shaheed Fazil Rahu in district Badin whereas Jati, Shah Bandar, Mirpur Sakro, Ghora Bari, Kharo Chan and Keti Bandar in district Thatta.

Multiplier effects of mentioned disasters worsened water, sanitation and hygiene in these areas of Sindh, so to minimize this worst situation of water sanitation and hygiene, NRSP, with the financial support of WaterAid initiated "Developing Coastal Communities through Integrated WASH Interventions (DCCIWI) in coastal zone of the area. DCCIWI is 11 months duration project started from 1st May 2013 to 31st March 2014. Project will develop communities through integrated Wash interventions in eight union councils of two districts of coastal belt i.e. Thatta and Badin.

The purpose of this project is to develop integrated WASH interventions in line with Pakistan Approach to Total Sanitation (PATS) and to prevent incidence of water, sanitation and hygiene related disease through these integrated WASH related interventions in target communities and in schools.

The main objectives of the DCCIWI project are as follows:

- To provide improved equitable, inclusive and

1 WHO World Health Report 2002

2 WHO-2004

3 Pakistan Social & Living Standards Measurement (PLSM) Survey-2006,2007

sustainable access to water sanitation and hygiene facilities to poor and marginalized rural communities in district Badin and Thatta until March 2014.

- To provide hygiene education to 98,000 people in 280 villages and 5,000 school children in 2 districts.
- To build capacity of stakeholders including communities, volunteers and government for sustaining WASH structures and services in targeted Districts
- Advocacy and lobbying with government, civil society organizations, CBOs and communities to strengthen WASH services.
- To ensure that 5,000 children in 100 schools have an improved access to appropriate WATSAN facilities.

Key Outputs:

- Social Mobilization, Mapping and Planning in 280 selected communities (140 for each district) of 2 districts.
- 280 (140 for each district) communities i.e. 98,000 people which includes 49,000 for each district acquire ODF status as per mutually agreed criteria.
- WATSAN incentive structures (Sewerage Treatment Units/ Hand pumps/ WSS) are constructed in 64 (32 per each district) selected villages as a reward for achieving ODF status.
- Appropriate models of 560 (280 per each district) Low Cost demo latrines constructed in ODF declared communities.
- Provided Hygiene education to 98,000 (49,000 per each district) people and 5,000 (2,500 per each district) children in schools.
- 166 (83 per each district) community activists including masons and entrepreneurs trained and involved on construction of low cost

latrines and to promote low cost sanitation in respective areas.

- 32 (16 per each district) sanitary marts established/strengthened in target area.
- Strengthening and Capacity building of Village Organizations and Local Support Organizations.
- Environment in and around 100 schools (50 per each district) is hygienic and open defecation free through hygiene education, rehabilitation of latrines and provision of hand washing facilities.

Survey Methodology

NRSP as an implementing partner of WaterAid in DCCIWI project conducted the KAP survey to assess the knowledge attitude and practices of the target population on water, sanitation and hygiene in 8 UCs of district Thatta and Badin.

The main objectives of the DCCIWI KAP survey are:

- To ascertain the knowledge, attitude and practices of the target population on water supply, sanitation and hygiene.
- To find out existing WASH facilities and situations in project operation area.
- To gather and analyze information that will assist WaterAid in making interventions more effective or modify appropriate WASH interventions.

Sampling Plan

A sample size comprising 10 percent of the total population i.e. 1,400 households from 8 targeted union councils of district Thatta and Badin estimated as an adequate number for structured interviews from households. Moreover 8 focused group discussions were also organized at UC level networks of local

support organizations (LSOs) of all eight UCs in project areas. Villages were randomly chosen through the blind picking. Interviews were conducted in 1,400 households from targeted area.

Quantitative and qualitative methods were used to capture the scenario in an adequate way. A questionnaire having multiple choice questions (MCQs) and open ended questions was designed to meet the objectives of survey in terms of factual information, knowledge, attitudes and practices on the subject of WASH in the areas defined above. The questionnaire was designed with the support of project staff. Project outputs and outcomes defined in agreement were taken into consideration. All crosscutting WASH related issues were covered in questionnaire. Data collection was done through interviews of the respondents using structured questionnaires and observations outlines for Focus Group Discussions (FGDs).

Staff Orientation and Pretesting of Questionnaire

A comprehensive orientation was given to the enumerators on data collection. Presentation on data collection tools and process was shared. Enumerators filled questionnaires through group work and discussion. The enumerators were further used to pre-test the questionnaire. The results of the pre-test were used to refine the questionnaire.

Field Work & Data Collection

Data was collected through interviews of the respondents using questionnaires for households and outlines for Focus Group Discussions (FGDs) from representatives of UC level networks of Local Support Organizations (LSOs). The survey was carried out by a team of 17 enumerators.

Household Questionnaires

Interviews were administered by using a household questionnaire in 1,400 households from the 19 villages and 8 union councils of project areas.

Focus Group Discussions

In order to make sample more representative, 08 focus group discussions were carried out. FGDs were held with key representative of LSO /networks in the Union councils. The participants were local community leaders, activists and selected community members. Issues related to sanitation and defecating practices, Hygiene, Water sources, used water treatment and Water borne diseases were discussed.

Data Quality Control Mechanisms

Staff involved in data collection was experienced in data collection and community work. In addition, the team received training on the interpretation and use of the household questionnaire which enabled them to collect quality data. The data collectors for each Union council were under the direct supervision team leader who ensured data quality. Team leaders verified 10 percent filled questionnaires, through random visits and spot checks.

Data Cleaning and entry

Data cleaning was carried out by involving both field and office editing of the collected data. In the field, the supervisor ensured that data was properly entered into the questionnaires at the close of the data collection exercise. An Excel base data sheet was prepared to punch and analyze the data through pivot tables.

Findings and Results

Socio-demographic Profiles of Respondents

Socio-demographic characteristics of a population influences knowledge, attitudes and practices of the people. Information about demographics and background characteristics of the sampled population remained very helpful in determining social norms, habits, perceptions, and understanding of community on WASH issues. During KAP survey data regarding age, gender, education, occupation and economic status was collected which covered different aspects of existing WASH facilities, provided a baseline for existing WASH knowledge, attitude and practices for potential project interventions. It would help NRSP in promoting change through WaterAid funded project in coastal zone of district Badin and Thatta. Demographic characteristics of 1,400 households are presented in table 1.

Table 1 provides basic information on demographic characteristics of the household interviewed. The demographic data shows that 1,400 (10 percent of total households targeted) were interviewed. 57 percent were male while 43 percent were female.

Out of these respondents, 91 percent were in the age bracket of 18 to 50 years.

Table 1 also presents the status of educational level of the sampled households. Facts show that 82 percent of total sample (1,400 HH) had no education while the rest had education level ranging from up to primary, middle, secondary and above grades. Similarly situation reveals that 11 percent had education up to primary, about 4 percent up to middle. Only 4 percent had secondary and above education level. While statistics regarding marital status shows that 97 percent respondents were married and 03 percent were unmarried.

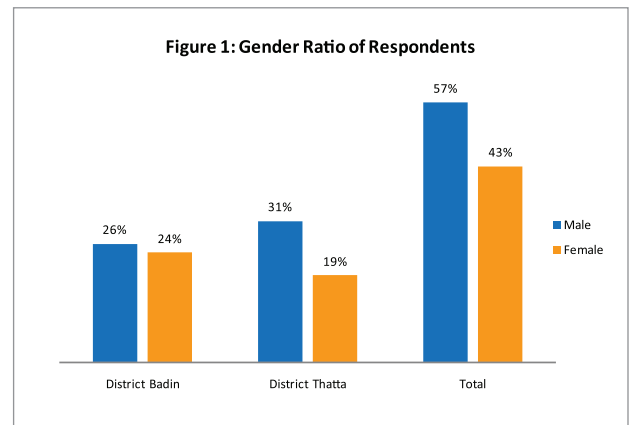

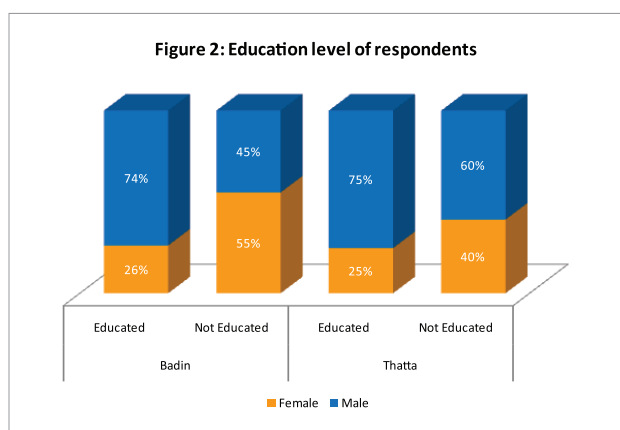

Figure 1 shows that out of 1,400 households interviewed, 57% were male and 43% were female. In

Table 1: Demographic Characteristics of Sampled Population

Characteristics of the Respondents	District Badin				District Thatta				%	Frequency
	Abdullah Shah	Lawari Sharif	Khadan	Bhugra Memon	Mirpur Sakro	Buhara	Gharao	SukPur		
Gender (%)										
Male	4.1	6.9	6.4	8.7	6.2	7.9	8.5	8.1	57	795
Female	9.6	4.9	5.1	4.4	6.5	4.6	4.1	4	43	605
Age of the Respondents (%)										
18 and above but below 30 years	5.6	5.1	5	4.4	7.9	8.2	5.3	6.4	48	671
31 and above but below 50 years	7.4	5.8	5	6.8	3.9	3.5	5.6	4.9	43	601
50 and above	0.7	0.9	1.4	1.9	0.9	0.9	1.7	0.8	9	128
Education level of respondent (%)										
No Education/ Illiterate	10.5	8.6	8.5	9.8	11.2	10.9	11.5	10.9	82	1,147
Up to Primary	1.7	1.4	2.1	2	0.9	1.4	0.8	0.7	11	156
Up to middle	0.5	0.8	0.5	0.9	0.1	0.2	0.2	0.4	4	50
Up to secondary	0.9	0.6	0.1	0.4	0.4	-	0.1	-	3	37
Above Secondary	0.1	0.3	0.1	0.1	0.1	-	-	0.1	1	10
Marital Status (%)										
Married	13.3	11	10.7	11.9	12.7	12.1	12.6	12.1	97	1,351
Unmarried	0.4	0.8	0.7	1.1	-	0.2	-	-	3	52

District Badin ratio of female respondents is good in comparison with male respondents, but on the other hand in district Thatta ratio of female respondents is 19% in comparison with male which is 31%. Education Level of respondent in both districts is shown in figure 2 which shows the Comparison in education between both the districts.

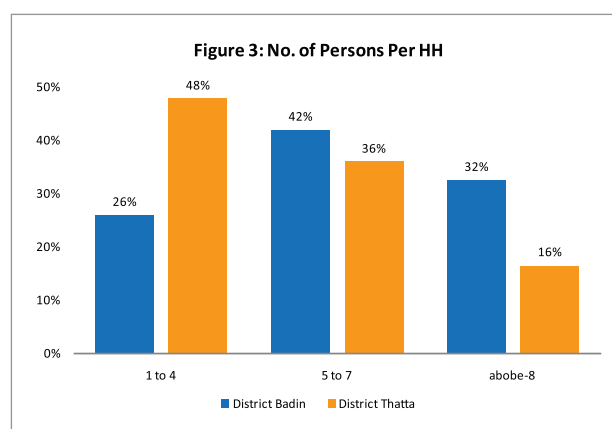

Household population

Household population has an impact on Knowledge attitude and practices of the community. During the survey HH occupancy was also calculated. Data about household UC wise population and average household size is presented in table 2.

Table 2 reveals that average size in sampled household is six persons. It further shows that between 1 and 14 people live in one household, but over 76 percent of the households had 4 to 7 persons. UC wise statistics show that UC Abdullah Sah, lawari

Shrif and Bugra Memon of district Badin had 700 household and 4,585 populations with an average of 7 persons per house. Similarly in UCs M. Sakro, Buhara, Gharao, Sukprur of district Thatta had 700 household and 3,584 populations with an average of 5.12 persons per household. District wise household occupancy is shown in figure 3; which shows that in district Badin 26 percent household had 1 to four family members, 42 percent households had 5 to 7 percent and 16 percent had 8 & above family members. Similarly in Thatta 48 percent household had 1 to four family members, 36 percent households had 5 to 7 and 16 percent had 8 & above family members.

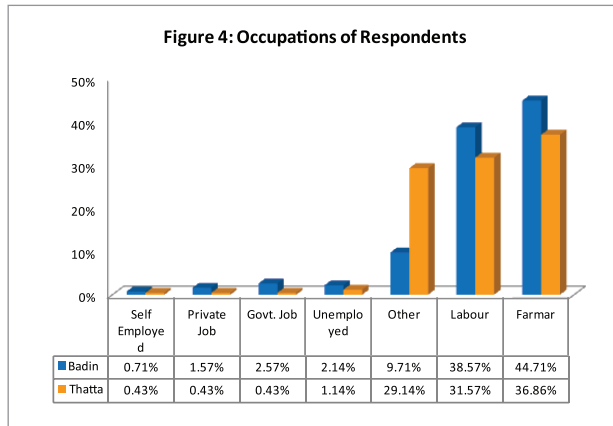

Household Occupation

Respondents were further asked about their source of livelihood. Agriculture is the dominant sector of the economy in Pakistan, and most of the persons were directly and indirectly engaged in the agricultural

Table 2: Number of people living in a household

No of Persons per Households	District Badin				District Thatta				Frequency	Percentage (%)
	Abdullah Shah	Lawari Sharif	Khadan	Bhugra Memon	Mirpur Sakro	Buhara	Gharao	SukPur		
One- four	39	41	36	65	100	76	80	78	515	37

HH Size	6.3	6.5	6.9	6.5	4.6	5.4	5.3	5.2		

* Total Population of Sampled house

sector. The results of household occupation are presented in table 3. 35 percent were engaged in skilled work, 20 percent were engaged in other occupations (fishermen, woodworkers, drivers,) while government and private salaried employment accounted less than 3 percent, 2 present were not doing any work. Table further shows UC wise details of household occupations. Agriculture was ranked high among all occupations in both districts except two union councils i.e. Buhara, Gharao where other occupations were ranked high.

Figure 4 presents district wise situation of Occupations. In Badin 44.71 percent respondents

were engaged agriculture, 38.57 percent were engaged labour 2.57 percent were doing Government Jobs. Similarly in Thatta 36.86 percent were engaged in agriculture, 31.57 percent were engaged labour 29.14 percent were doing other jobs Fishing, Wood work etc.

Monthly Expenses

Respondent were further asked about monthly expense which is considered a tangible contributor in creating demand for sanitation and determining WASH practices and is the most powerful driver of WASH behaviors. As mentioned earlier, most of the people were engaged in agriculture and labor, and their consumption power was very poor. Results regarding monthly expenses are presented in table 4.

Table 4 presents the data on monthly expense of household interviewed as monthly expense of 67 percent households was below 10,000 while 30 percent were having their expense up to 10,000 and below 20,000. Monthly expense of only 3 percent of households was above 20,000.

Table 3: Occupations of Sampled Households

Housing Structure and Ownership

Housing structures and ownership are strongly associated with knowledge, attitude and practices. Survey shows that out of 1,400 HH interviewed, 99.5 percent were permanent resident of survey areas and having their own houses, remaining were living in rented free/relative houses. Data regarding housing structures is presented in Table 5.

Table 5 shows that out of 1,400 sampled households, 87 percent (1,215 HH) had Kacha houses. 13 Percent (185 HH) of the households were residing in Pacca and semi Pacca and others (made of wood etc.). UC wise data also present similar results.

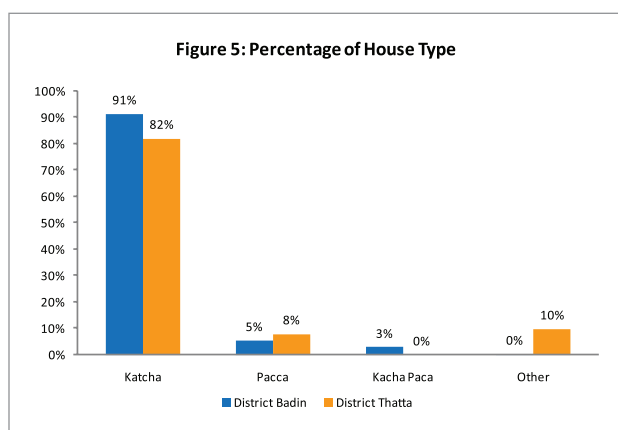

Figure 5 shows district wise detail of housing structures in District Badin and Thatta respectively. In district Badin 91 percent households were residing in Kacha houses, 5 percent had Pacca and 3 percent had Kacha Pacca housing structures, while In Thatta, 82 percent of the households were residing in Kacha houses, 9 percent in Pacca and 10 percent in other (made with wood etc.) housing structures.

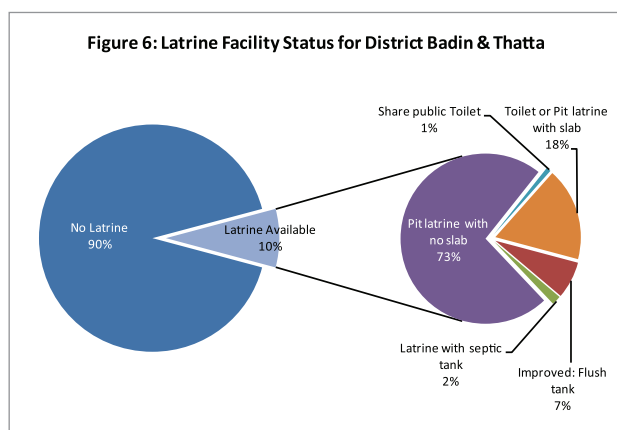

Table 5: Housing Structure

Sanitation

Availability of Latrine Facilities

Availability of latrine facilities depicts sanitary situation of a household which has direct implications on health and hygienic status of household members. None availability of latrine facilities put people at stake and increased the risk of acquiring infections and other diseases. Survey reveals that only 10 percent of household surveyed (136 households out of 1,400) had some forms of latrine at household level remaining 90 percent had no latrine facility. Details of Latrine available and their types are shown in figure 6 which shows that out of 136 (10 percent of total latrines available), 7 percent had improved flash tank, 2 percent had Latrine with septic tank. 73 percent had pit latrine with no slab, and 18 percent had Pit latrine with slab. Out of 136 latrines facilities available, 36 percent were using improved toilet facilities (which includes: Flush/pour flush, pipe sewerage system, septic tank, pit latrine with slab). Improved toilet facility included 7 percent flush tank, 2 percent latrine with septic tank followed by

pit latrine with slab 18 percent. Therefore according to JMP definition⁴ out of 136 (10 percent of household having latrines) only 46 households (34 percent) had improved sanitation facilities. Figure 7 displays that in district Badin 31 household were using improved latrines while in district Thatta only 15 household had improved latrine facilities. Similarly district Badin 83 households had unimproved facilities and in district Thatta 7 households had unimproved latrine facilities. Improved latrine facilities were calculated by adding the numbers of Flush latrine, latrine with septic tank, pit latrine with slab.

Open Defecation Practices

According to the findings, open defecation was found a predominant practice. Results are presented in Table 6.

Table 6 shows UC wise details of defecation practices. It reveals that 92 percent households in Thatta and Badin were used to defecate in open field. Only 8

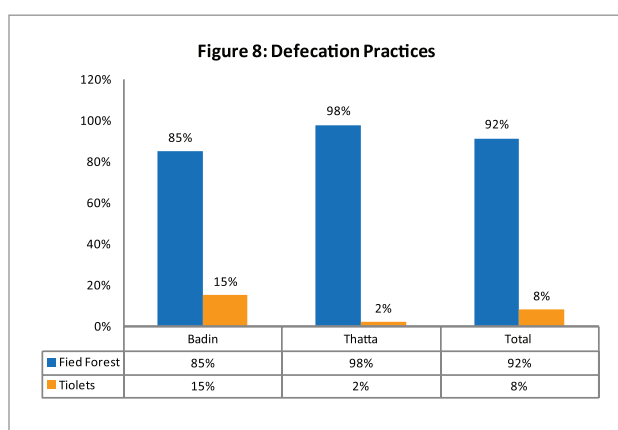

⁴ According to JMP, for MDG monitoring, an improved sanitation facility is defined as one that hygienically separates human excreta from human contact.

Table 6: Status of UC Wise Defecation Practices

S#	Defecating Practices	Abdullah Shah	Lawari Sharif	Khadan	Bhugra Memon	Mirpur Sakro	Buhara	Gharao	SukPur	Total	%
1	Open Field	174	144	139	138	177	176	177	156	1,281	92
2	Public Latrine	1	2	-	-	-	-	-	-	3	-
3	Neighbor Latrine	2	3	7	-	-	-	-	-	12	1
4	Relative Latrine	3	5	10	-	-	-	-	-	8	1
5	HH Latrine	12	10	14	29	-	-	-	13	78	6
6	Other	-	1	-	16	1	-	-	-	18	100

percent households were using latrines of various types. Disposal of human excreta for both adults and children was done in the open spaces behind the villages.

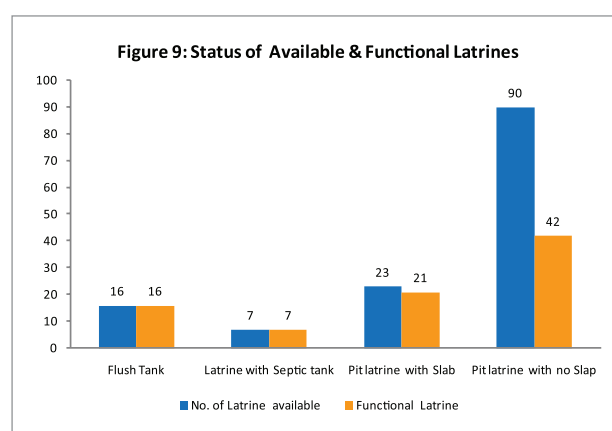

Figure 8 Shows district wise defecation Practices. In District Badin 85 percent households were using open field for defecation and 15 percent households were practicing fixed point defecation whereas in Thatta 98 percent Households were defecating in Field and 2 percent were practicing fixed point defecation.

Types and Status of Functional latrines

The sanitary situation of a household has direct implications on its hygienic status and health of household members. Absence of sanitary facilities and disposal of waste exposes people to risk of acquiring infections and other diseases. District and UC wise status of functional latrine is presented in table 7.

Table 7 shows that flush latrines and Latrine with septic tank available at household were functional. Whereas 21 out of 23 pit latrine with slab were functional. Pit latrine with no slab had comparatively high ratio in nonfunctional latrines, out of 90 only 42 were functional. Out of 136 latrines, 86 were functional and used, which is shown in figure 9.

Cleanliness status of available latrine

Table 8 describes the habits and practices of latrine cleaning in the household. Data shows that 63 percent of latrines available were kept clean and 37 percent latrines were not used, functional or not kept clean.

Table 8 shows that out of 136 latrines available, 86 were used, functional and hygienically maintained, in UC Abdullah Shah out of total 36, 20 were kept clean, in UC lawari Sharif all latrines were kept clean and in UC Kadhan 15 out of 42 were kept clean. Number

Table 7: Status of Functional latrines

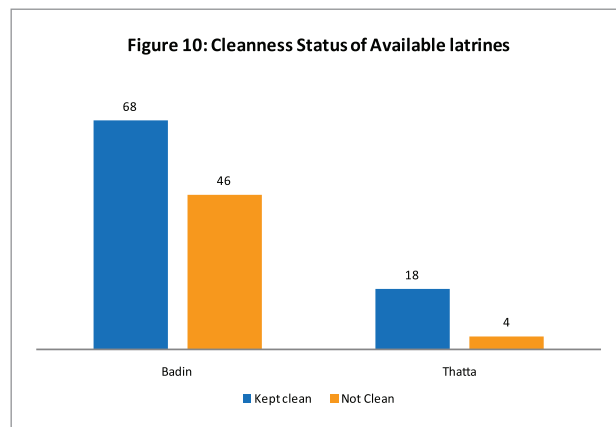

Status of Functional Latrine	Flush Tank	Latrine with Septic tank	Pit latrine with Slab	Pit latrine with no Slap
No. of Latrine available	16	7	23	90
Functional Latrine	16	7	21	42

Table 8: UC Wise Status of Latrines kept clean

Latrine Cleanliness	District Badin				District Thatta				Total
	Abdullah Shah	Lawari Sharif	Khadan	Bhugra Memon	Mirpur Sakro	Buhara	Gharao	SukPur	
Kept clean	20	11	15	22	8	-	-	10	86
Not Clean	16	-	27	3	-	-	-	4	50
Total	36	11	42	25	8	-	-	14	136

of UC Bhugra Memon was found comparatively high in cleanliness latrines. 22 latrines out of 25 were kept clean in UC Bhugra Memon district Badin. Table further shows that in district Thatta UC Sakro households having latrines had kept them clean and In UC Sakro out 14 households having latrines, 10 household kept their latrine clean.

Figure 10 shows that in Badin out of 114 latrines available 68 were kept clean and hygienically maintained. In Thatta out 22 latrine available, 18 were kept clean. Remaining not either used, functional or kept clean.

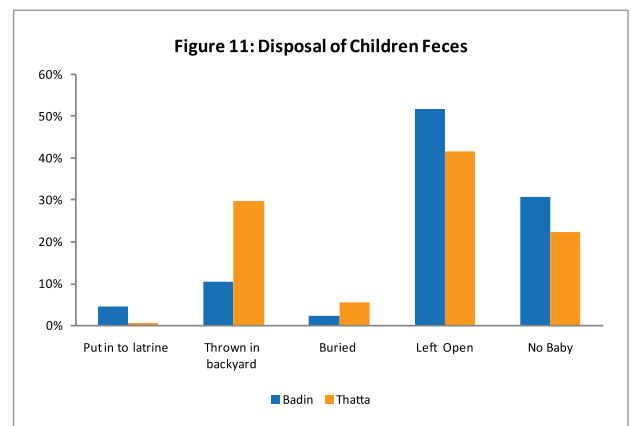

Handling Children Excreta

Handling children excreta also shows community behavior towards sanitation and hygienic practices. Question about disposal child excreta was asked from the households interviewed. Summary of results is described in table 9.

Table 9 shows that 47 percent households were throwing of children excreta in pen fields a. Safe disposal of children excreta was practiced by only 2 percent. 20 percent households were throwing children excreta in backyard of their house. 4 percent were burning it, remaining 27 percent households reported no children or they didn't answer.

Figure 11 shows district wise summary of handling of Children excreta. In Badin 52 percent left it opens, 10 percent throw it in backyard, 4 percent put it in latrine and 31 percent reported no baby or did not answer. In Thatta 42 percent households left children excreta open, 30 percent throw it in backyard and 22 percent reported no baby or did not answer.

Hand Washing Facilities, Material nearby/ in the HH Toilet

Table 10 represents that out of total household surveyed, 14 household had Tap, 124 had Bucket and

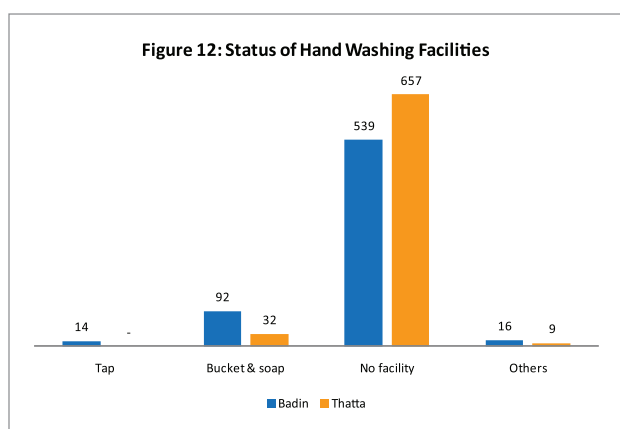

Table 9: Handling Children Excreta

Disposal of Children Excreta	District Badin				District Thatta				Total	%

Total	192	165	160	183	178	176	177	169	1,400	100

soaps facilities nearby/ in the toilet. 85 percent (1,196) household had no hand washing facility which reflects poor condition of hand washing attitude and practices of peoples living in flood affected areas.

District wise situation of hand washing facilities are further described in figure 12.

Figure 12 shows type wise results of hand washing facilities in district Thatta and Badin. In Badin 539 household had not hand washing facility and in Thatta 657 households had no any hand washing facility.

Accessibility of latrine to older and Person with Disabilities (PWDs)

Accessibility of older persons and persons with disabilities was poor in all households having latrine facilities available. However, out of 136 HH, 66 responded that latrines were accessible to older persons and person with disabilities.

Knowledge about Hazards of Open Defecation

This survey reveals that 92 percent of households practice open defecation. In order to assess and determine their knowledge, attitude and question about the hazards of open defecation was asked. UC wise responses are presented in table 11, which shows that about 68 respondents reported open defecation is dangerous to health, 17 percent said no to this question and 15 percent don't know about the hazards of open defecation.

Through discussions during the survey and FDGs, 68 percent households responded open defecation

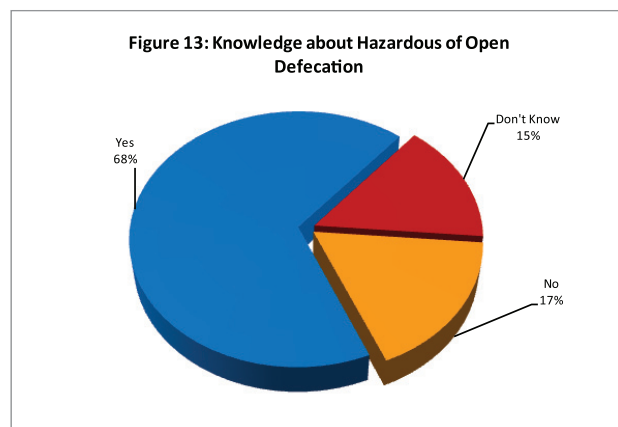

Table 10: Hand Washing Facilities nearby/in the HH Toilet

dangerous to health, but other were of the view that they forefathers had been practicing open defecation and it had no hazard. Survey results further shown in figure 13.

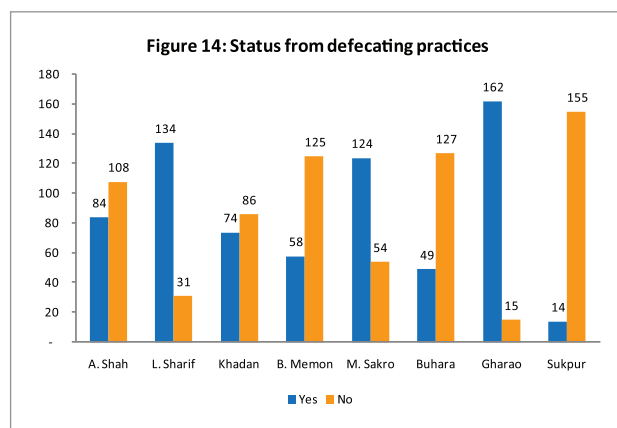

Reasons for not Building Latrines

When asked about the main reason for not building household latrine, 1,095 household reported “No Money” was the main cause 264 household reported No tradition, 24 responded “No Space” as the cause of not building latrine in their houses. UC wise results are presented in table 12.

Satisfaction from Current defecating Practices

Figure 14 displays information about the respondents’ satisfaction from current defecating practices and UC wise responses about satisfaction level from current practices. Overall 50.7 percent persons were not

satisfied from defecation practices, remaining were satisfied from their defecation practices. Detail of results is shown in Figure 14.

Reasons for not being satisfied

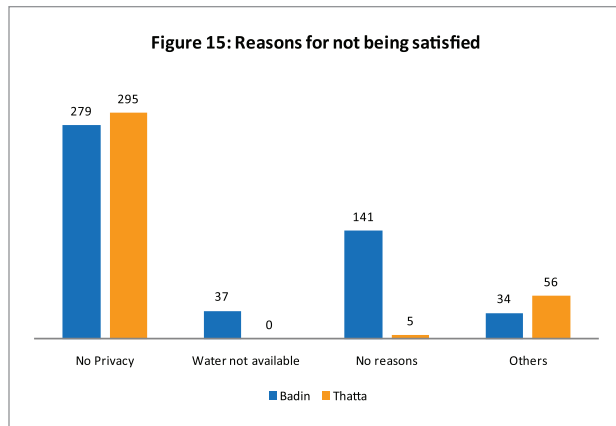

Respondent were further asked about the reason for being not satisfied. Data describes that the main causes of dissatisfaction from current defecation practices, was “no privacy” 574 households, water not available, 37 households, 146 were dissatisfied without any reason 90 households were dissatisfied due to some other reasons. Privacy of the household latrines due to unsuitable location or non-availability of door/ curtain at its door was causing dissatisfaction among the users/ respondents.

Figure 15 show that in District Badin 279 household were dissatisfied due to no privacy, 37 due to non-availability of water, 141 without any reasons and

Table 12: Reasons for not building latrines

Union Council	Reasons for not building latrine			Total
	No Space	No Money	No tradition

Gharao	4	173	0	177
Sukpur	2	139	20	169
Total	24	1,095	264	1,222

34 due to other reasons. In district Thatta 295 households had no privacy, 5 without any reasons and 56 due to other reasons.

In response of the Question of reasons for not building latrines was lack of money by most of the households.

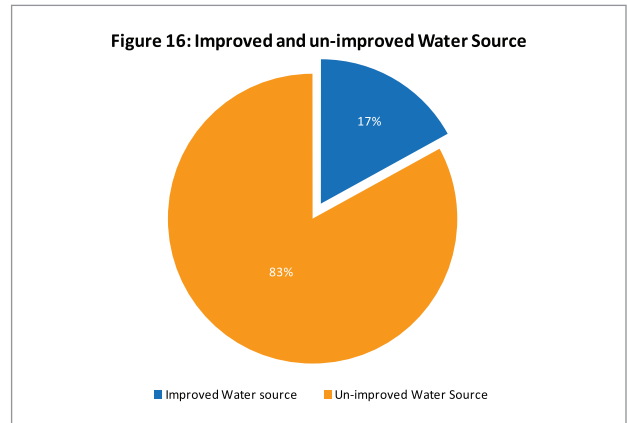

Drinking water

Main Source of water

Quality of water is interdependent with water source and storage. In sampled households, the main sources of water were groundwater which include Hand Pumps, common well, canal, and river. In surveyed areas water supply came from water hand pumps, filtration plants, common wells and public taps. Results of study are presented in table 13.

Table 13 shows the summary of water sources available. In both districts most of households (1,150 out of 1,400 total surveyed) were using water form common hand pumps. In Badin, UC Lawari shairf had improved water sources. All 165 sampled households of UC Lawari sharif were using common hand pumps. In UC Kadhan of district Badin and UC Sukhpur district Thatta had 31 and 23 household using common well as drinking water source which were relatively high from other 5 UCs of both districts. Status of improved and unimproved water sources in sampled house is shown in figure 16.

Figure 16 shows that according to the survey, 83 percent (82 percent from hand pumps and 1 percent

from filtration plants etc.) households were using improved sources of drinking water⁵. Only 17 percent of household interviewed were using unimproved source of drinking water.

Distance from Water source

Distance from water has somehow affects its usages and quality of water. To simplify the question, respondent were asked to tell the distance in meters. As most of the people were using water from hand pumps and persons with disabilities had an access to source of drinking water, 1,080 out of 1,400 responded that persons with Disabilities PWDs had an easy access to water sources. UC wise data

⁵ According to JMP, an improved drinking-water source is defined as one that, by nature of its construction or through active intervention, is protected from outside contamination, in particular from contamination with fecal matter)

Table 13: Main Source of water

Main Source of Water	Main Source Of Water									Total	%
	Abdullah Shah	Lawari Sharif	Khadan	Bhugra Memon	Mirpur Sakro	Buhara	Gharao	SukPur

50-200,	61	41	5	56	0	74	34	69	340	24
More than 200 m	32	13	26	22	3		130	17	243	17
Total	192	165	160	183	178	176	177	169	1,400	100

regarding distance of water source from households is presented in table 14.

Data reveals that 83 percent household spent less than or about half an hour to the nearest safe drinking water source, as their distance of water source form their house is less than 200 meters. Only 17 percent had distance from water source more than 200 meter. They were using common well, river water.

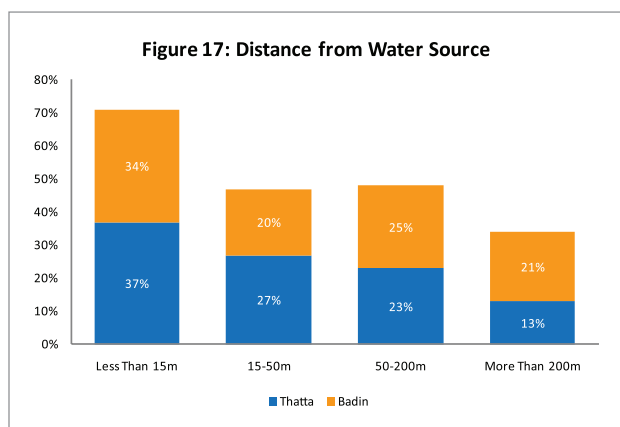

Figure 17 shows that in Badin (87 percent) and Thatta (79 percent) household had water source at less than 200 meters and 21 and 13 percent households had more than 200 meters distance from water source respectively.

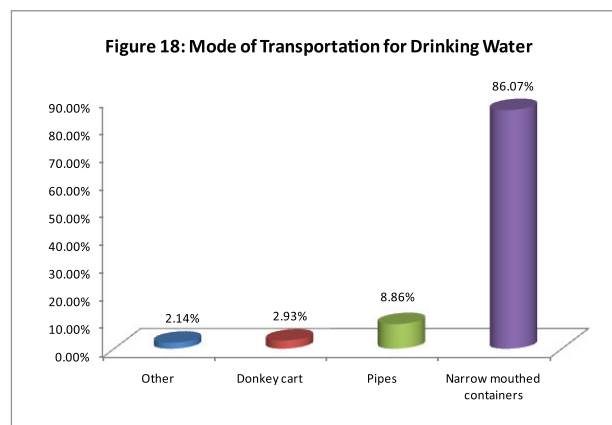

Drinking Water Storage & Transportation

Water, in most of households interviewed was transported and stored in Narrow mouthed containers. While for most households, there was no separation on water stored for use and for drinking

or other household purpose. It was also observed that people were using open Pots & buckets for water storage which mean that keeping drinking water clean and away from contamination was a challenge in most households.

Table 15 shows UC wise details of water collection practices. It is very interesting that in UC Buhara of district Thatta all household interviewed were having piped water. Remaining all UC had similar results on water transportation. Percentage wise mediums of water transportation are presented in figure 18.

Figure 18 shows that 86 percent households were transporting water through Narrow mouthed Containers, 09 percent through pipes 5 percent through donkey marts and other pots.

Quality of Drinking Water

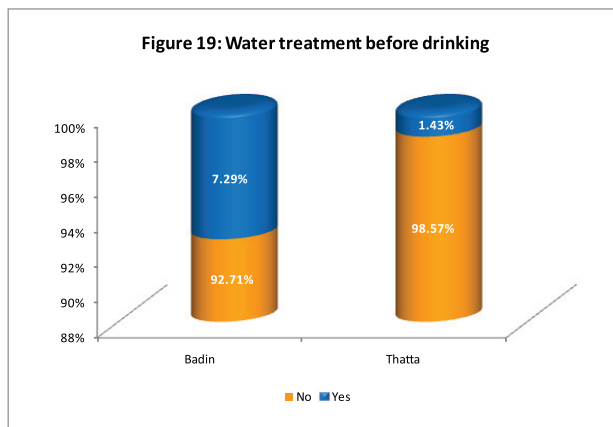

As mentioned earlier that quality of water is direct linked with water borne diseases (WBDs). In order to know situation of clean and safe water available at

Table 15: Water Collection and Transportation

Total	192	165	160	183	178	176	177	169	1,400	200

surveyed area, respondents were asked about the quality of drinking water. During the survey and FGDs people were also asked to share the properties of safe drinking water with respect to taste/ color. Results are presented in table 16.

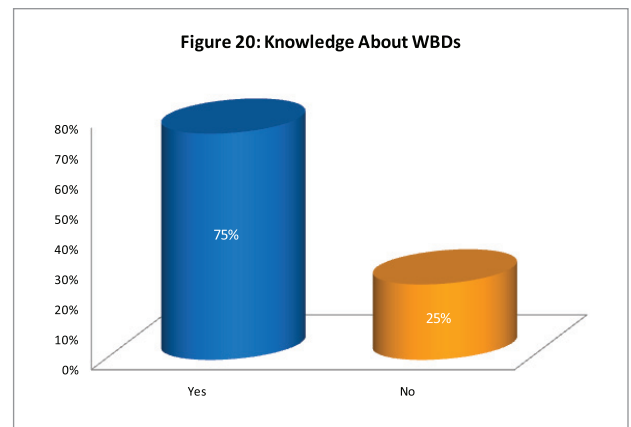

Statistics in table 16 shows 96 percent of household interviewed were not practicing water purification before drinking. They reported water as potable, while 04 percent household responded that water was not potable. Figure 19 shows district wise responses on water purification.

In district Badin 7.29 percent of sampled household said that they were practicing water purification techniques on different occasions. Only one percent households in Thatta had practiced water purification

practices. Overall 96 percent household were satisfied with the quality of water available.

Knowledge about water borne disease (WBDs) Questions water borne diseases was asked from the respondents. Summary of responses is presented in figure 20, which shows that 75 percent of the household had knowledge about water borne disease whereas 25 percent had no knowledge about WBDs. Respondent were further asked to tell the name of WBDs. Majority of the respondent's responded diarrhea/ malaria as major WBDs.

Knowledge about Water Scarcity

Quantity of water contributes in water, hygiene and sanitation practices of the community and Further.

Table 16: Water Treatment/ Purification

	District Badin				District Thatta				Total	%
	Abdullah Shah	Lawari Sharif	Khadan	Bhugra Memon	Mirpur Sakro	Buhara	Gharao	SukPur

Total	192	165	160	183	178	176	177	169	1,400	100

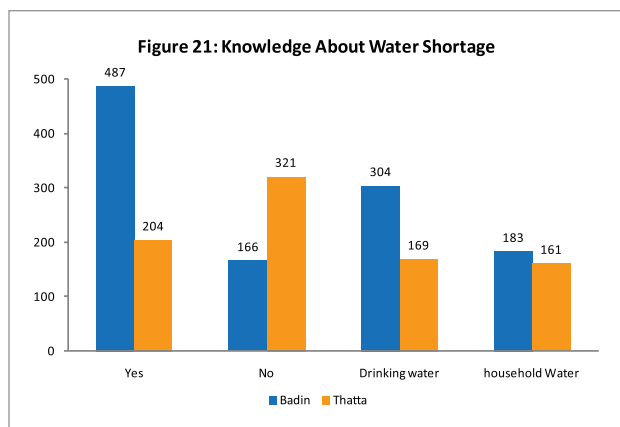

Table 17: Knowledge about water Scarcity

Knowledge about Water Scarcity	UCs	Yes	No	Drinking water	House Hold Water	Total
District Badin	Abdullah Shah	97	44	94	12	106
	Lawari Sharif	83	55	96	10	106
	Khadan	96	25	36	63	99
	Bhugra Memon	141	42	78	98	176
District Thatta	Mirpur Sakro	28	148	66	55	121
	Buhara	8	136	23	3	26
	Gharao	142	30	87	79	146
	Sukpur	26	31	4	24	28

So, knowledge of the households on Scarcity of water was gauged. Results are presented in table 17.

Table 17 shows that more than 50 percent household had knowledge about water scarcity. Further question from those who heard about water scarcity, was asked about types of water scarcity; Data is present data below figure.

Figure 21 reveals that more that out of 691 households (having the knowledge about water storage) 364 mentioned drinking water scarcity while 341 household associated it to water for household use.

Knowledge to cope with diarrhea

Question about Knowledge to cope with diarrhea was also asked. Only 455 household responded that one should immediately consult doctor in case of diarrhea they maximum household had not answered.

Personal Hygiene

Hand washing Before Eating

Proper hand washing reflects the attitude of a person towards self cleanliness. Proper hand washing; on critical times (before eating/ cooking and after defecation) is integral part of improved hygiene practices. It can prevent people from many diseases. During the survey questions about hand washing practices were asked to know the existing situation and practices in the sampled villages. Results of the study are presented in table 18.

Table 18 shows the UC wise summary of hand washing practices. Hand washing with water before eating and cooking, water was hygienic practice by 84 percent, people. Only 16 percent people responded that they were washing hand with soaps before eating.

An associated question on reasons of hand washing, 80 percent responded to remove the dirt, but the majority of them were not using soap, Only 17 responded that hand washing with soap prevent from diseases. 3 percent did not answer. District wise summary of the hand washing practice before eating is shown in figure 22.

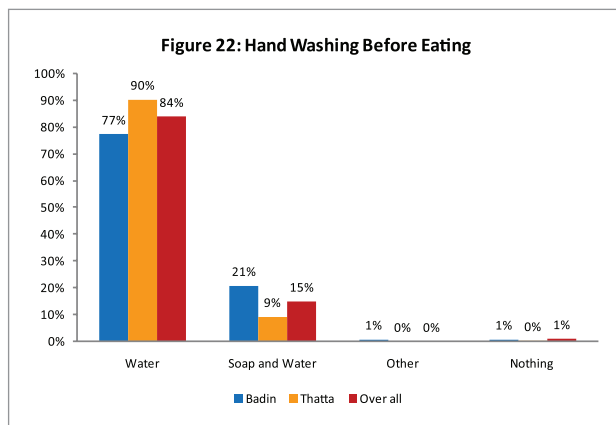

Figure 22 shows that in Badin 77 percent household interviewed were using water for hand washing, 21 percent soap and with soap and water. Similarly in Thatta 90 percent household were using water for hand washing before eating and only 9 percent with soap and water whereas one percent households were not washing their hands.

Hand washing Practices of Household Population

In order to calculate the hand washing practices by population (Men, Women and Children) were taken from the family members in household interviewed. Results are presented in table 19.

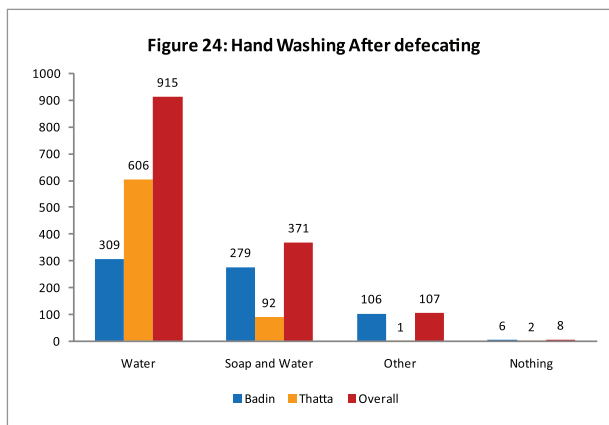

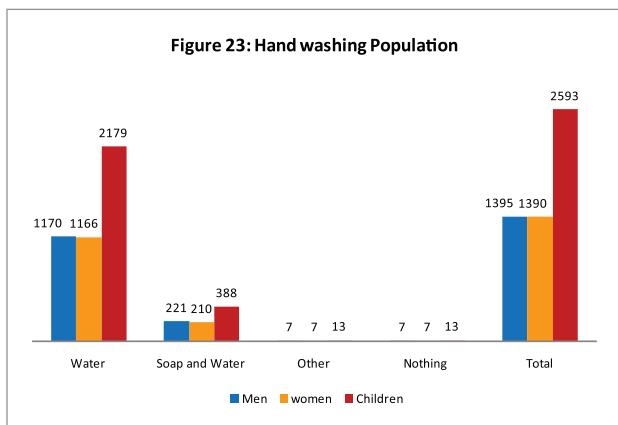

Table 19 and Figure 23 presents, 1,170 men, 1,166 women and 2,179 children use water before eating whereas,

Table 18: Hand washing practices before Eating and Cooking

Union Council	Hand Washing before Eating and Cooking								Total	Percentage

Water	1,170	1,166	2,179
Soap and Water	211	210	388
Other	7	7	13
Nothing	2	-	-

211 men 210 women and 388 children were using soap before eating in both districts.

Hand Washing After Defecation

Table 20 more or less depicts the situation of washing after defecation. After defecation 65 percent of respondent wash their hands with water, 27 percent with soap and water.

Figure 24 shows that in Badin 309 households wash their hand with water, 270 households were using soap and water after defecating. In district Thatta 606 households were using water for hand washing after defecation and only 92 households were using soap after defecation.

Frequency of personal Hygiene

Frequency of self cleanliness was also measured in sampled household. Results are presented in table 21. Table 21 and Figure 25 shows that most of the households using brush/maswak on regular basis. Frequency of bathing is also ranked regular.

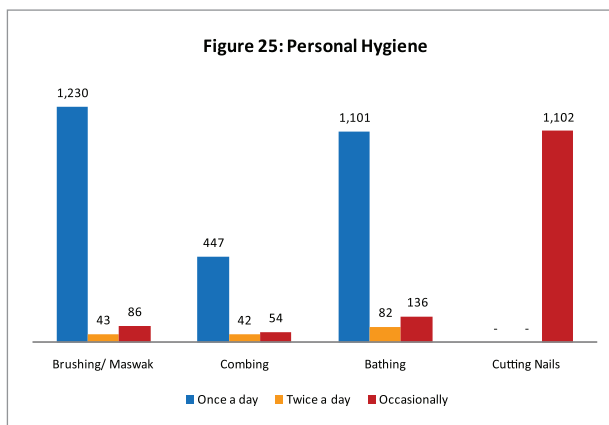

Table 20: Hand washing practices after defecating

4	Cutting Nails	-	-	1,102	-	1,102

Participation in Hygiene awareness

Existing situation of knowledge on water and sanitation programme is measured in the survey.

Statistics related to awareness on health and hygiene are not very encouraging. UC wise detail of households' interviewed and health & hygiene session is presented in table 22.

Only 152 households from 1,400 interviewed had participated in different community awareness sessions. In Badin district, 107 households had participated seminar, sessions and training. In Thatta 45 households had participated in awareness events.

Table 22: Participation in Water & Sanitation Programs

Union Council	Yes	No	Seminar	Sessions	HH Training	Total

Total	152	1,248	4	114	34	152

Solid Waste Management

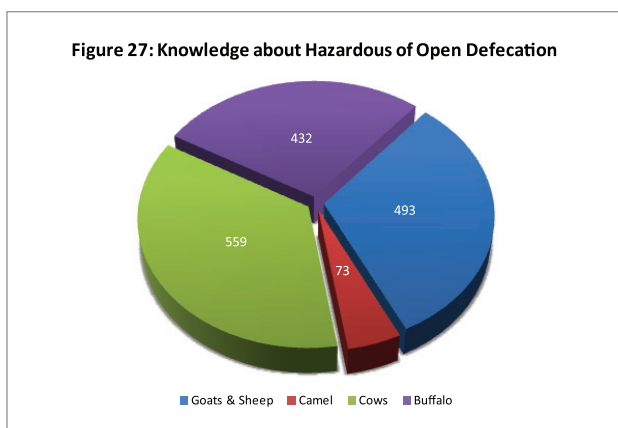

People living in rural areas mostly keep animals for getting some economic benefit from them. In order to make households and its surroundings hygienically livable, it is equally important to properly dispose-off the animal waste as human excreta.

Livestock Possession

A number of questions were asked about the availability of livestock in the household and ways to dispose off animal excreta.

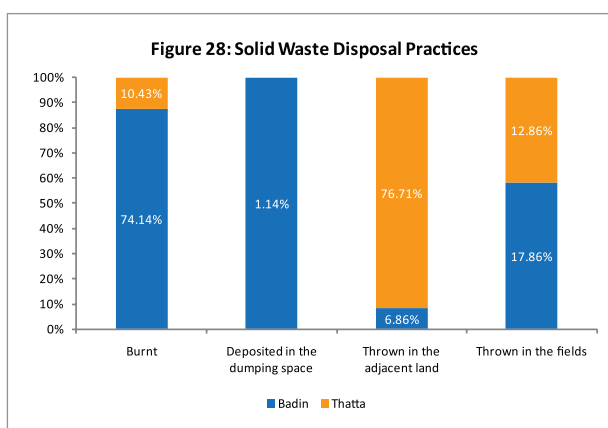

Data reveals that 471 households had 559 cows, 402 had 432 buffalos, 73 households had 73 camels, and 431 HH had 493 sheep and goats, So animal excreta was ranked high in solid waste management. Further details are presented in figure 27.

Survey shows that all households that had livestock were practicing improper animal waste disposal by throwing it in field.

Household Waste Disposal

Figure 28 shows the comparison of solid waste management trend between district Badin and Thatta. In District Thatta 10.43 Household burn animal waste, 76.71 throw it in adjacent places and 12.86 percent throw it in open field whereas in District Badin 74.14 percent burn animal waste, 1.14 percent deposit it into dumping place, 6.86 percent throw it in adjacent place and 17.86 percent households throw it in open field.

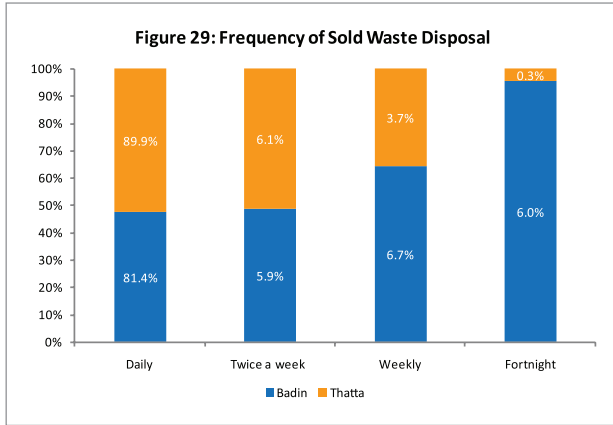

Waste Water Drainage

Similar to the household waste disposal, household waste water drainage also indicates the sanitary practice of the people in the area. 95 percent households had no proper drainage system.

Table 23 shows the trend of waste disposal in both the districts, that how often they dispose-off solid waste, in District Badin 81% people throw waste on daily basis, while in Thatta 90% people throw waste

Table 23: Solid Waste disposal Practices

Frequency	District Badin						District Thatta					
	Abdullah Shah	Lawari Sharif	Khadan	Bhugra Memon	Frequency	%	Mirpur Sakro	Buhara	Sukhpur	Garho	Frequency	%
Daily	178	148	140	104	570	81%	178	128	168	155	629	90%
Twice a week	12	14	5	10	41	6%	0	26	3	7	36	5%
Weekly	2	3	14	29	48	7%	0	22	0	8	30	4%
Fortnightly	0	1	0	41	42	6%	0	0	2	0	2	0%

daily. Frequency of Solid Waste Disposal can be further seen in Figure 29.

Hazards of improper waste disposal

Question about improper waste disposal was asked from the respondents. Amazingly there was huge difference in the knowledge and practice of solid waste disposal. Which shows that they knowledge possess by the respondents is either poor or irrelevant. Results are shown in figure 30.

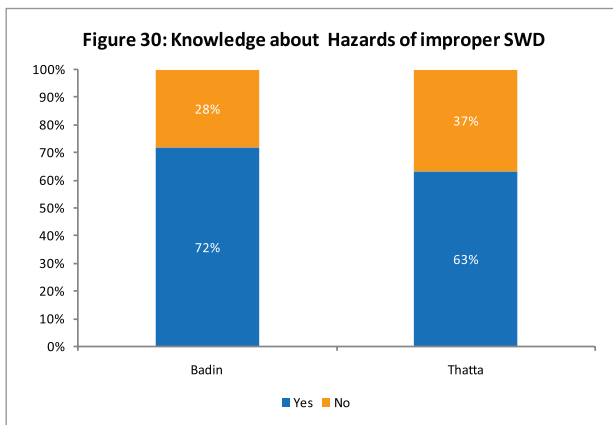

Figure shows the knowledge of hazards of improper waste disposal, 72% people in Badin and 63% people in Thatta know about the hazards of improper waste disposal, 28% people in Badin and 37% people in Thatta don't know about the hazards of improper waste disposal.

Perception about Waste as a Problem

Perception about the waste as a problem was also gauged during the household survey and FGDs. Results show that people 41 percent household's recognized that waste was a problem of the area 37 percent reported the bad smell caused by waste, 13 percent reported that it makes their will dirty and responses of other 9 percent were missing.

School Wash

Availability of Sanitation Facilities

Ten schools, five from each district were surveyed. In Badin only one schools had hand pump and remaining schools had water cooler for drinking water, similarly in district Thatta, all schools had water cooler for drinking water and no other facility available. None of these schools had hand washing facility. Only four schools had pit latrine available.

Sanitation Facilities in Schools

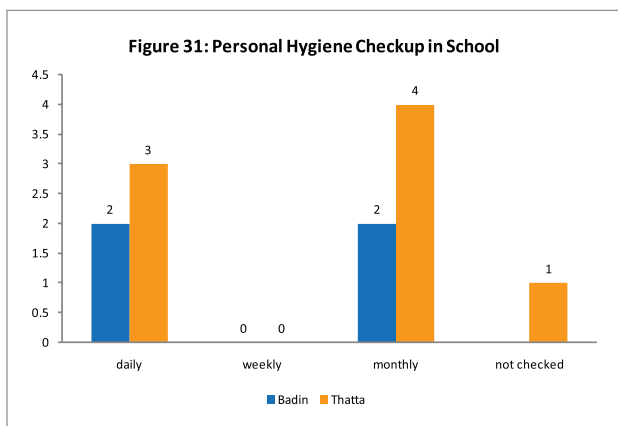

Availability of sanitation facilities was observed very poor in surveyed schools. In Badin hand washing facilities were available in 40 percent of surveyed schools whereas in district Thatta there was no hand washing facility in schools.

Defecating Practices in Schools

Survey reveals that 80 percent students were defecating in open fields. While in Badin only 20 percent were using simple pit latrine.

Personal Hygiene in schools

As mentioned earlier that Hand washing facilities were not available. According to surveyed results, schools were in miserable condition.

Figures 31 shows that cleanliness was checked by teachers in 4 schools of Thatta on daily and monthly basis whereas in Badin only 2 schools were checked. 50 percent of schools surveyed were not checking student cleanliness which shows lack of awareness hygiene and impacts of unhygienic practices.

Health/ Wash Awareness activities

As for as education and information about water and sanitation is concerned, no activity related to awareness on health, hygiene had ever carried out. School survey had neither schools management committees nor sanitation committees.

Waste Disposal

Solid waste disposed off in fields near schools is also observed as improper. 7 percent of schools were burning solid waste while 70 percent were throwing it to open field. Only 10 percent schools had dumping point for solid waste disposal.

Conclusions and Recommendations

Conclusions

This survey was conducted to determine Knowledge, Attitude & Practices (KAP) of DCCWI targeted area.

- 92 percent households were practicing open defecation and only 3 percent households had an access to improved sanitation facilities remaining households were using fixed point defecation and unimproved sanitation facilities.
- Survey shows that majority of households were practicing improper hand washing and claimed of knowing hand washing methods which reflects their perceived knowledge. Hand washing facility mostly comprises of water only, without soap. 84 percent of the households were washing hands during the key times only with water and 15 percent of the respondents were washing hands with soap and water.
- 32 percent households were unaware of the hazards of leaving their feces uncovered in the fields. Awareness about hazards of open defecation and its relationship with different diseases should be given in the project area.
- Up to 83 percent of households interviewed had an access to safe drinking water from safe water sources i.e. hand pumps and filtration plants, while, 17 percent of the target population was using drinking water from unsafe water source.
- Water transportation and water storage practices were poor as many of the households fetch drinking water in narrow mouthed containers or buckets without covering it when store at homes..
- 75 percent household surveyed had

knowledge about water borne diseases. They knew about diseases name but they had limited knowledge about the relationship between open defecation and diseases.

- 95 percent of the total household interviewed said that they throw the household wastes to the bush/garden or leave them in the compound there was no proper drainage system.
- In schools there were no school management committee or sanitation committee to promote hygiene practices and advocate with other stake holders for missing facilities related to WASH specifically.

Recommendations

On basis of the KAP survey, it is recommended that;

- There is need for intensive campaign on hygiene/sanitation to strongly discourage open defecation which is a predominant practice among the population targeted.
- An Advocacy Campaign may be launched to mobilize local political and administrative support and resources for successful implementation of the Wash interventions
- Field staff should spend maximum time with the community to mobilize, aware and slowly transform the entire population from bad to good hygiene/sanitation practices
- There is need to increase awareness to people on the danger of drinking water from unsafe water sources which is the root cause of many diarrheal and water-borne diseases. Messages should discourage the use of rainy season surface water sources
- In awareness sessions, Hazard of open defecation , unimproved latrine facilities and their relationship with disease, characteristics of safer drinking water,

hazards of improper disposal of waste, relationship between unsafe drinking water and water borne diseases, proper/ safe water storage should be focused.

- In schools there should be a school management committee or sanitation committee to promote hygiene practices and advocate with other stake holders for missing facilities related to WASH.

13	Relationship with Household head	1. Wife 2. Husband 3. Son/Daughter 4. Mother 5. Father 6. Other	14	Family Size	Men: ____ Women: ____ B: ____ G: ____ Total _____
15	House ownership	7. Own 8. Rent 9. without rent 10. others (specify)	16	Housing structure	1. Pacca 2. Katcha 3. Kacha /pacca 4. Other
17	Education	1. No education 2. Up to primary 3. Up to middle 4. Up to Secondary 5. Above Secondary	18	Occupation	1. Govt. Sector 2. Private Sector 3. Farmer 4. Business man 5. Unemployed 6. Labor 7. Other
19	How long you have been living here?	1. Up to 1 year 2. 2-5 years 3. More than 5 years	20	Average HH monthly expenses	1. Below 10,000 2. Upto 10,000-20,000 3. 20,000-30,000 4. 30,000-40,000 5. Above 40,000

Part A: Defecation Practices and Sanitation

21. What kind of latrine Facility does your house hold use?

- a. Improved: Flush tank
- b. Latrine with septic tank
- c. Toilet or Pit Latrine with slab
- d. Pit latrine with no slab
- e. Shared: Public Toilet
- f. No Toilet

22. Is the latrine currently working (Yes/No)
23. Is the latrine kept clean (Yes/No)
24. Does everyone wear sandal in latrine in your home (Yes/No)
25. Are the existing latrines accessible by older persons, Person with disability, etc (Yes/No)?
26. Do you have the functional hand washing facility inside/nearby toilet?
- a. Tape
 - b. Bucket and soap
 - c. Others
 - d. No facility
27. Do adults in your household use the latrine for defecation? (Tick only one)
- ___ Always ___ Sometimes ___ Never ___ Do not know)
28. Do children in your household use the latrine for defecation? (Tick only one)
- ___ Always ___ Sometimes ___ Never ___ Do not know)
29. Where do adults in your household usually go to defecate?
- a. Public latrine
 - b. Neighbor's Latrine
 - c. Relative Latrine
 - d. Field/Forest
 - e. Household Latrine
 - f. Others (please specify) _____
30. Where do Children in your household usually go to defecate?
- a. Household latrine
 - b. Other Latrine
 - c. Open defecation – near house
 - d. Open defecation – field/forest
 - e. No Children
 - f. Other (Please specify) _____
31. In your household, how are babies' faeces (less than 3-years) usually dispose off? (check/select/tick only one)
- a. Put into latrine
 - b. Thrown in garbage
 - c. Buried
 - d. Left in open
 - e. No baby
 - f. Other (please specify) _____
32. Does anybody from neighboring household use your latrine? (Yes/No) _____
33. Are you satisfied by the place where your family defecates at present
- a. Satisfied
 - b. Not satisfied
 - c. Don't know

34. (If not satisfied), What are the reasons for not being satisfied
- a. No privacy
 - b. Water not available
 - c. No reason
 - d. Other _____
35. Do you think that open defecation is dangerous for health
- a. Yes
 - b. No
 - c. Don't know
36. What are the reasons of not building a latrine in your household
- a. No space
 - b. No money
 - c. No tradition
37. Where do your children go for bathing? (Indoor/Outdoor) _____

If Outdoor then:

- a. Tube well
- b. Canals
- c. Ponds/swamps

Part B: Drinking Water

38. What is the main source of drinking water used for members of your households?
- a. Common well
 - b. Water filtration plant
 - c. Common hand pump
 - d. Other
39. How far is the main water source?
- a. Less than 15m
 - b. 15-50m
 - c. 50-200m
 - d. More than 200m
40. Do the water source available is sufficient for the locality?
- a. Yes
 - b. No
41. Have you heard of water scarcity?
- a. Yes
 - b. No
 - c. Don't know

42. Which water is scarce?

- a. Drinking water
- b. Water for HH use
- c. Don't know

43. Do person with disability /Injury have access to water source?

- a. Yes
- b. No

44. What is the mood of transport?

- a. Pipes
- b. Narrow mouthed containers by foot
- c. Donkey cart
- d. Any other

45. Is the quality of water brought for drinking is potable? Yes/No

46. Do you treat your water before drinking? (Yes/No) _____

47. If yes, then why do you treat your water before drinking? (Check all that apply)

- a. Contaminated
- b. Good for health/appearance
- c. Do not know
- d. Others (Please specify) _____

48. How do you treat your water? (Check all that apply)

- a. Boil
- b. Add bleach/chlorine
- c. Strain it through a cloth
- d. Use a sand filter
- e. Solar disinfection
- f. Do not know
- g. Others (please specify) _____

49. You have knowledge about water borne disease?

- a. Yes
- b. No

50. If yes, would you please name any three diseases that spread from poor sanitation / unhygienic conditions?

- a. _____
- b. _____
- c. _____

51. In your opinion, is there any relationship between open defecation and diseases (Yes/No)

52. Would you please suggest three key actions (to be taken by the households/community) for improved sanitation and hygienic conditions?

- a. _____
- b. _____
- c. _____

53. What immediate action should a family take in case of diarrhea?

- a. Drink more liquid
- b. Drink ORS continuously
- c. Drink Homemade solution of salt / Sugar
- d. Consult Doctor
- e. Taking Medicine
- f. Injection / Drip

Part C: Hygiene & Hand Washing Practices

54. With what do you or your family member wash hands before cooking?

- a. Water
- b. Soap and water
- c. Nothing
- d. Other (Specify) _____

55. With what do you wash your hands before eating?

- a. Water
- b. Soap and water
- c. Nothing
- d. Other (Specify) _____

56. With what do you wash your hands after using latrine?

- a. Water
- b. Soap and water
- c. Nothing
- d. Other (Specify) _____

57. Why do you wash your hand with soap? (Check all that apply)

- a. To remove dirt/make clean
- b. To prevent diseases
- c. Other (Specify) _____

58. When do you usually wash your hand with soap? (Check all that apply)

- a. When they are dirty
- b. After defecation
- c. Other (Specify) _____

59. Do you wash your hands with soap in a designated hand wash place? (Yes/No) _____

If yes, where do you usually wash your hands with soap?

- a. At the water source
- b. In the latrine
- c. Near latrine
- d. In the kitchen
- e. Other (Specify) _____

60. Do you and your family members practice following personal hygiene activities?

- a. Brushing teeth/Maswak Once/twice a day/Occasionally/No
- b. Combing Once/twice a day/ Occasionally/No
- c. Bathing Once/ Twice a day/Once week/other _____
- d. Cutting Nails Once in a week/once in a month

61. Have you ever undertaken any hygiene related activity?

- a. Yes
- b. No

If yes tick the appropriate activity:

- a. Seminars
- b. Theatres
- c. Health and hygiene sessions
- d. Health and Hygiene training
- e. Any other specify: _____

Part D: Solid Waste Management

62. Livestock owned by the HH

Cows/Bullocks	Buffalo	Camel	Goats/sheep	Donkey /Horse	Other

63. Explain the current solid waste management system being practiced by your HH

S#	Solid Waste collection / dumping practice	% of solid waste
1	Deposited in the dumping space by HH members	
2	Thrown in the backyard of the house or in adjacent land	
3	Thrown in the fields	
4	Burnt by the HH members within house	
5	Any other (please specify)	

64. Rank the type of solid waste found mostly in your neighbourhood

Component	Rank (1 as highest and so on)
Food/Organic	
Animal Dung	
Any Other	

65. How often do you dispose-off the household waste? (Tick the appropriate answer)

Daily	Twice a week	Weekly	Fortnight

66. What is the current status of waste water disposal?

	Tick the appropriate option
Covered Drains connected with functional disposal plant	
Covered Drains disposing water in a main drain /streams / open fields	
Open Drains connected with functional disposal plant	
Open Drains disposing water in a main drain / streams / open fields	
Open pit within house	
No system exists, water disposed off in the street	
Any other, please specify	

67. Do you know the hazards of improper waste disposal?

- a. Yes
- b. No

68. If Yes, What can be the hazards of wastes?

- a. Injury
- b. Diseases
- c. Bed Smell
- d. Dirty environment

Signature of Enumerator: _____
